

PRIMERS

Promoting Faster Emergence & Root Development

ANALYSIS (0-22-3 WITH 6.7% Zn)

Application Guidelines

WHAT IS IT?

- > Seed dressing for application onto cereals and oilseed prior to seeding.
- > Unique formulation with high concentrations of Phosphorus, Potassium and Zinc.
- > The Gel Rheology Technology™ keeps the highly concentrated product suspended and helps with seed adhesion and drying out.

WHEN & WHY USE IT?

- > To reduce the effect of cold and wet conditions and when seeding into a dry soil.
- > If seeding into high pH soils, heavy manure land, soils with high organic matter.
- > To provide nutrients lacking in sandy and light-textured soils.
- > Western Canadian soils are Zinc deficient and the harvested grains from these soils are low on Zinc.
- > Zinc is required for energy production and protein synthesis.
- > Phosphorus and Zinc are key drivers for an optimum germination and vigor.
- > Zinc aids in the prevention of maturity delays.

WHAT TO EXPECT?

- > Quick emergence and establishment of the seedlings.
- > Good root development and biomass.
- > Advanced days to maturity.

Cereals: 3 mL/Kg of seed; 122 bu per 10 L jug; 410 L per 5000 bushel bin.

Oilseeds: 6 mL/Kg of seed or 73 x 50 lbs bags per 10 L jug.

Primer Zn® should not be used with Rhizobia on pulses.

Primer Zn® can be applied onto the seed in combination with other seed treatments. Check the best option for your targeted combination (see compatibility charts).

If required, Primer Zn® can be diluted with water for a more uniform coverage onto the seed. It is highly recommended to wash the seed treatment equipment after using the product.

The product is available in 10 L jugs, 450 L and 1000 L IBC's.
